the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion, and the number of people aged 65 and over has increased from 0.2 billion to 0.5 billion (United Nations, 1999).

There are a number of reasons why the world population is ageing. First, the number of people who are under 15 years of age has decreased from 1.1 billion in 1990 to 0.9 billion in 1999. This is due to a decline in the birth rate, which has been caused by a number of factors, including a decline in the number of children per woman, a decline in the number of women who are having children, and a decline in the number of women who are having children at a young age.

Second, the number of people who are aged 65 and over has increased from 0.2 billion in 1990 to 0.5 billion in 1999. This is due to a decline in the death rate, which has been caused by a number of factors, including a decline in the number of people who are dying from infectious diseases, a decline in the number of people who are dying from non-infectious diseases, and a decline in the number of people who are dying from accidents.

Third, the number of people who are aged 65 and over has increased from 0.2 billion in 1990 to 0.5 billion in 1999. This is due to a decline in the death rate, which has been caused by a number of factors, including a decline in the number of people who are dying from infectious diseases, a decline in the number of people who are dying from non-infectious diseases, and a decline in the number of people who are dying from accidents.

Fourth, the number of people who are aged 65 and over has increased from 0.2 billion in 1990 to 0.5 billion in 1999. This is due to a decline in the death rate, which has been caused by a number of factors, including a decline in the number of people who are dying from infectious diseases, a decline in the number of people who are dying from non-infectious diseases, and a decline in the number of people who are dying from accidents.

Fifth, the number of people who are aged 65 and over has increased from 0.2 billion in 1990 to 0.5 billion in 1999. This is due to a decline in the death rate, which has been caused by a number of factors, including a decline in the number of people who are dying from infectious diseases, a decline in the number of people who are dying from non-infectious diseases, and a decline in the number of people who are dying from accidents.

Sixth, the number of people who are aged 65 and over has increased from 0.2 billion in 1990 to 0.5 billion in 1999. This is due to a decline in the death rate, which has been caused by a number of factors, including a decline in the number of people who are dying from infectious diseases, a decline in the number of people who are dying from non-infectious diseases, and a decline in the number of people who are dying from accidents.

Seventh, the number of people who are aged 65 and over has increased from 0.2 billion in 1990 to 0.5 billion in 1999. This is due to a decline in the death rate, which has been caused by a number of factors, including a decline in the number of people who are dying from infectious diseases, a decline in the number of people who are dying from non-infectious diseases, and a decline in the number of people who are dying from accidents.

Eighth, the number of people who are aged 65 and over has increased from 0.2 billion in 1990 to 0.5 billion in 1999. This is due to a decline in the death rate, which has been caused by a number of factors, including a decline in the number of people who are dying from infectious diseases, a decline in the number of people who are dying from non-infectious diseases, and a decline in the number of people who are dying from accidents.
